Receipt & Invoice Digitizer

Frontend Development Contribution

Sriya MK

HTML • CSS • JavaScript

My Contribution

I developed the complete frontend interface for the Receipt & Invoice Digitizer application, creating a modern, user-friendly dashboard that allows users to upload, manage, and view their digitized receipts.

🎨 UI/UX Design
Created clean, intuitive interface with pink gradient theme

💻 Frontend Development
Built responsive dashboard using HTML, CSS, JavaScript

🔄 API Integration
Connected frontend to backend APIs for data flow

Key Features Developed

User Authentication
JWT-based login system

File Upload
Drag & drop interface

Receipt Dashboard
Table view with filters

Search & Filter
Real-time vendor search

View/Delete Actions
Manage receipts easily

Responsive Design
Works on all devices

Technologies Used

Frontend Technologies

- HTML5
- CSS3 with Gradients
- Vanilla JavaScript
- Fetch API for HTTP requests
- LocalStorage for JWT tokens
- Google Fonts (DM Sans, Space Grotesk)

Design Features

- Pink gradient color scheme
- Auto-hiding navbar on scroll
- Drag & drop file upload
- Interactive hover effects
- Smooth transitions & animations
- Mobile-responsive layout

Code Organization

Clean, modular code structure with separation of concerns:

HTML Structure

- Semantic HTML5 elements
- Navbar with navigation items
- Centered header with large title
- Card-based layout
- Table for receipts display

JavaScript Logic

- JWT authentication check
- File upload handling
- Drag & drop implementation
- API integration (fetch)
- Dynamic table rendering

CSS Styling

- Custom pink gradient background
- Flexbox for layouts
- Hover effects & transitions
- Responsive media queries
- Custom scrollbar styling

User Interface Highlights

1. **Sticky Navbar**

   Automatically hides on scroll down, reappears on scroll up for better UX

2. **Centered Hero Section**

   Large 80px title with gradient background creates strong visual impact

3. **Upload Zone**

   Dashed border, hover effects, and drag-drop functionality for easy file uploads

4. **Data Table**

   Clean table design with search filters and action buttons for each receipt

Responsive Design Implementation

The dashboard adapts seamlessly across all device sizes:

Desktop

> 768px

- Full width layout
- All features visible
- Horizontal navbar

Mobile

< 768px

- Stacked layout
- Smaller fonts (48px title)
- Vertical navbar

Impact & Results

100%
Responsive
Works on all screen sizes

Modern
UI/UX
Clean, intuitive interface

Fast
Performance
Optimized load times

Secure
Auth Flow
JWT-based protection

Logo samples

Improved UI/UX

Login and registration page

In the earlier version, the login, forgot password and registration pages were very basic and form-oriented without strong visual structure.

Redesigned these pages using a modern card-based layout with proper spacing, alignment, and consistent typography to match the UI of the home page.

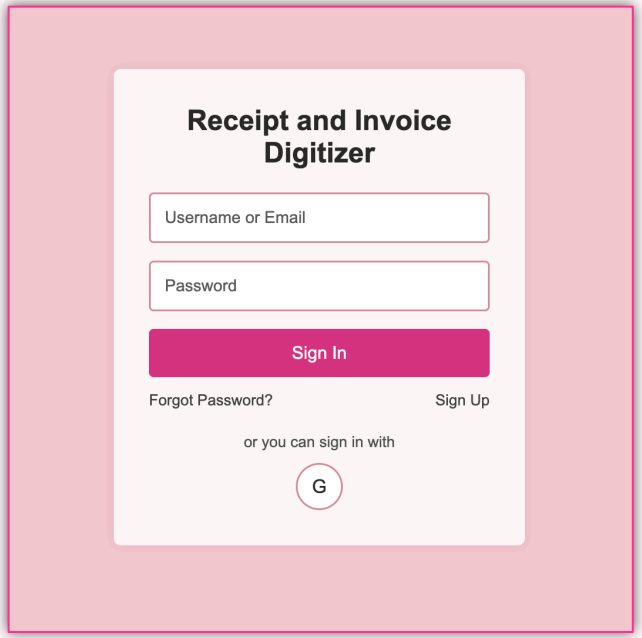
Introduced a pink gradient theme to maintain visual consistency across the application.

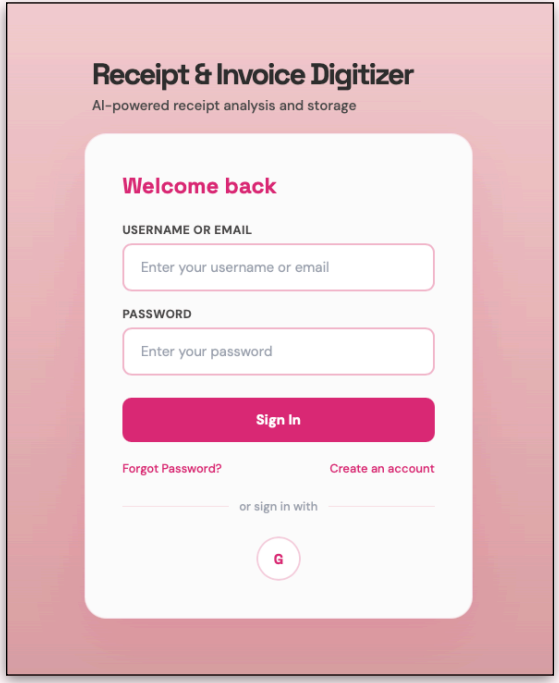
Proper form validation feedback so users immediately know if there is an input error.

Additionally, added a smooth transition between login and registration to reduce user friction and improve navigation flow.

Frontend Structure

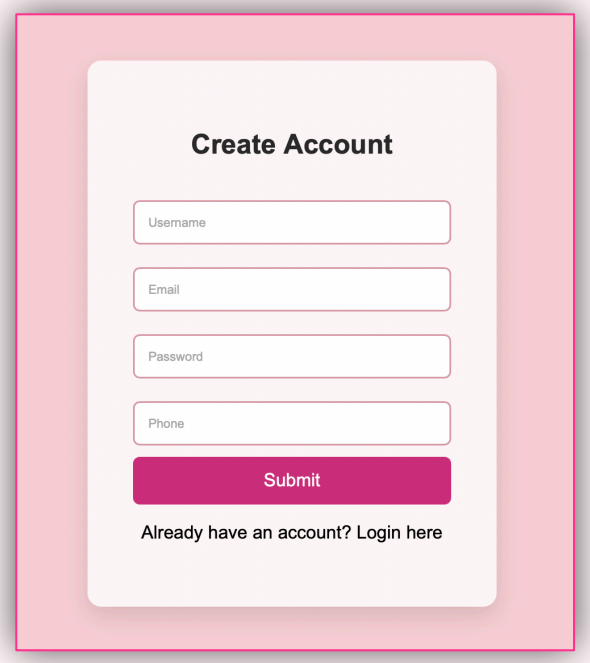
Login page

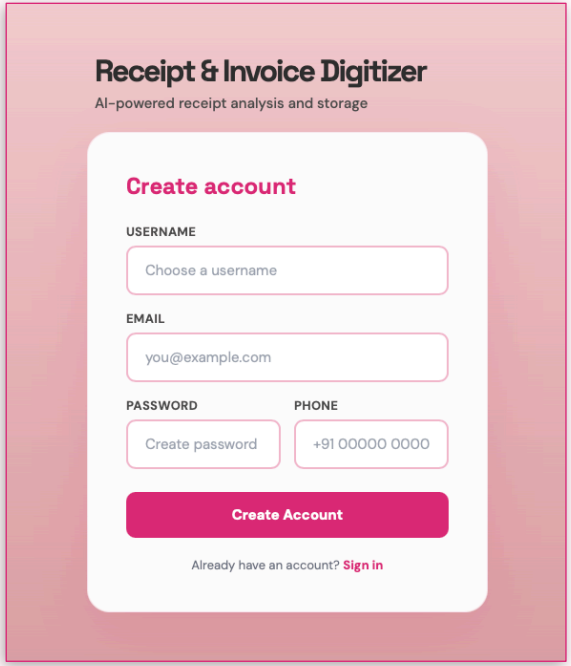




Frontend Structure

Registration Page





Improved UI/UX

Forgot Password

The earlier forgot password page lacked clarity and visual hierarchy.

Simplified the layout by keeping only essential elements — an email input field and a clear call-to-action button.

The design now follows the same theme and layout structure as login and registration, ensuring design consistency.

Added the Header “Receipt and Invoice Digitizer” to match that of the home page.
